3 Chapter 2 5 2.3 Electrons in Atoms • One of the first models: Bohr atom Bohr assumed that electrons orbited the nucleus due to Coulomb forces

Chapter 2: Atomic Structure and Chemical Bonding

A chemical compound is a chemical substance composed of many identical molecules (or molecular entities) composed of atoms from more than one element held together by chemical bonds. A chemical element bonded to an identical chemical element is not a chemical compound since only one element, not two different elements, is involved. There are four types of compounds, depending on how the ...

Chemistry - 101science.com

Ionic bonding is a type of chemical bond that involves the electrostatic attraction between oppositely charged ions, and is the primary interaction occurring in ionic compounds. The ions are atoms that have lost one or more electrons (termed cations) and atoms that have gained one or more electrons (termed anions). This transfer of electrons is termed electrovalence in contrast to covalence.
